

AERSAFE

SAFER AIR, SUPERIOR CARE

www.aersafe.eu

OUR STORY

We come from the mountains; we breathe the breeze of the Alps every day: for us, clean air is a must, not an option.

Inspired by the fresh air of the Dolomites, we created AERSAFE, the indoor air filtration solution: a combination of proven technologies that eliminate bacteria and remove dust, pathogens and pollen.

We grew up in unspoilt nature; for us, the environment is imperative, not an accessory.

Thanks to the combination of the biocidal contact action of copper metal and UV-sterilised water, we do not use potentially harmful chemicals. We do not

generate hazardous waste and maintain the natural properties of the air. Moreover, our technologies are designed according to the circular economy principles and the transition 4.0. Built to last and easy to recycle.

AERSAFE is the investment that brings the same pure mountain air into your office or home.

By choosing AERSAFE, you will achieve three goals.

You will achieve a worry-free user experience (maintenance will become a thing of the past), you will make an environmentally conscious choice (reducing energy consumption and eliminating waste), and you will provide your indoor spaces with fresh, clean air like that of the Dolomites.

BENEFITS

BUSINESS & ENVIRONMENTAL

No Maintenance

The UV self-wash system eliminates maintenance and the risk of contagion.

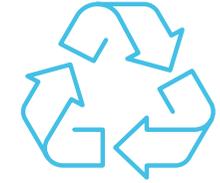

Investment

Maintenance cost savings and recovery of an initial investment with tax relief.

No Waste

No spare parts are needed during the life of our device; a product made to last.

Circular Economy

Our technologies are built to last and are easy to recycle.

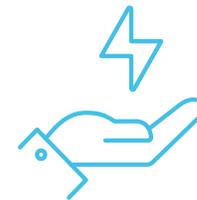

Installation

The plug-and-play solution allows easy installation for any interior space.

Transition 4.0

Our technologies are eligible for Law No. 232 of 11-12-2016, which allows a 40% tax relief.

Energy Efficiency

Low energy consumption: it is equal to an incandescent bulb.

Sanitised Air

We only remove hazardous substances, without the use of any chemicals.

AERON

AHU FILTRATION UNITS

AERON is our plug-in solution for recirculating air conditioning systems. It can be applied directly to ducts or integrated into air machines. AERON brings the advantages of our technology into large-scale systems, allowing the use of smaller fans with a significant reduction in consumption, maintenance and purchase costs.

Our engineering department is available for any customisation

PATENTED FILTER OUR SOLUTION

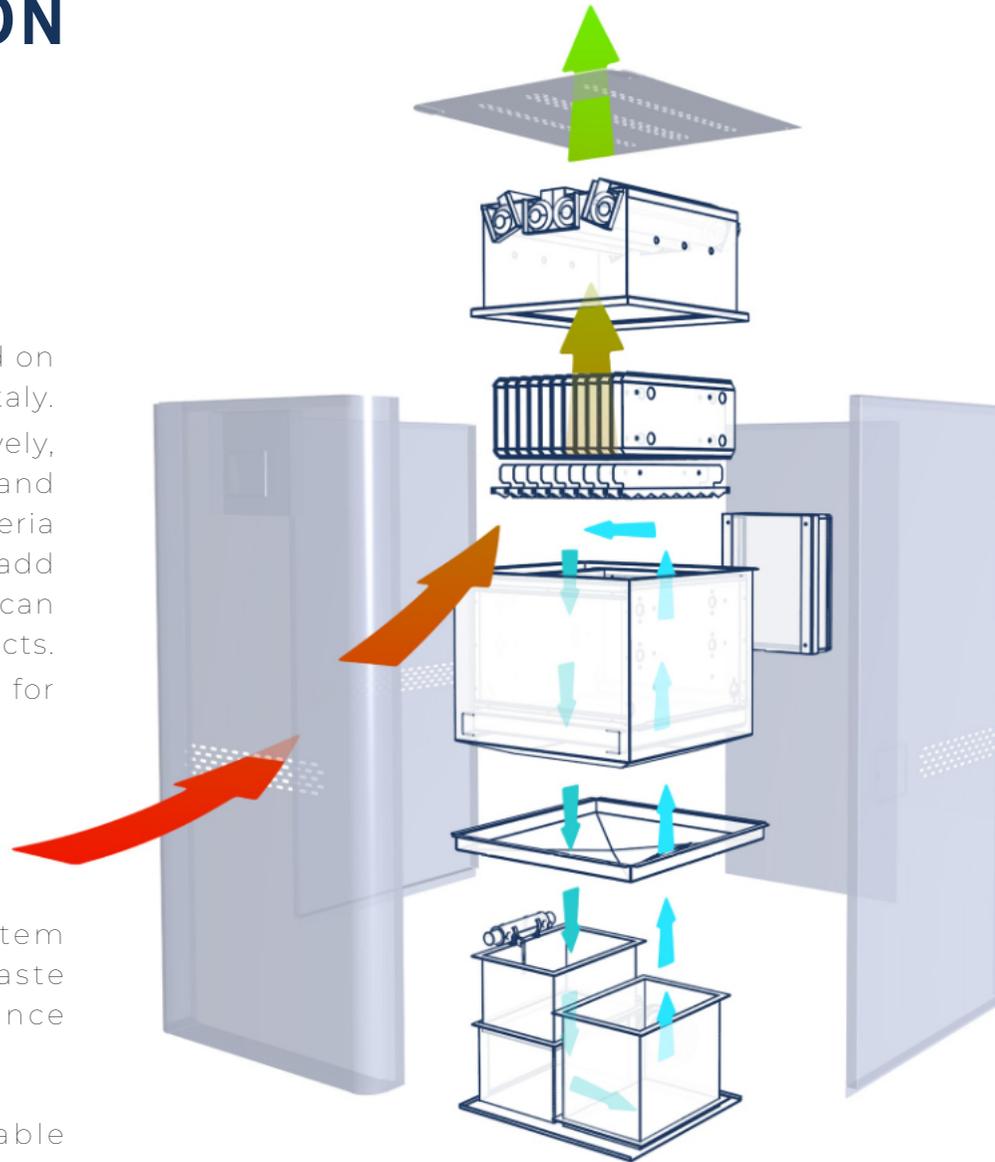

Patented Solution

AERSAFE technology is based on four patents and is Made in Italy. We work on the air subtractively, removing particulate matter and destroying viruses and bacteria without the need to add chemical additives that can generate hazardous by-products. Our device is an enabler for Transition 4.0 bonuses.

Environment

The AERSAFE filtration system generates no hazardous waste and thus solves maintenance risks.

We use first-class recyclable components and materials following the dictates of the circular economy.

Self-operating technology

Our technology is designed to operate autonomously. It can also be controlled and programmed remotely using sophisticated software.

The unique copper filter system can self-sanitise and self-regenerate, making it extremely easy to operate without maintenance.

Research and Innovation

Our technologies have been tested repeatedly for more than one year with accredited Testing Laboratories and with the involvement of two prestigious Italian Universities.

The result of this research has enabled us to develop an extraordinarily high-performance and long-lasting product.
